# 1. Introduction

The California Outcomes Measurement System Treatment (CalOMS Tx) Data Dictionary provides a detailed explanation of every CalOMS Tx data element for file version 2.0 and file version 2.1. These elements are part of CalOMS Tx electronic records submitted by the Counties and Direct Contract Providers to DHCS for CalOMS Tx every month. This is a companion document to the CalOMS Tx File Instructions, the CalOMS Tx Data Collection Guide, and the CalOMS Tx Data Quality Standards documents. A general description of the contents of each of these documents is as follows:

There are six documents, including this Data Dictionary, that together provide a complete and detailed explanation of the CalOMS Tx system. A general description of the contents of each of these six documents is as follows:

***CalOMS Tx Data Collection Guide*** – this is a detailed guide that describes how the response to each admission, discharge or annual update question should be collected by treatment providers and data collection resources. These explanations include a description of valid values allowed for answering each question.

***CalOMS Tx Data Dictionary*** – (this document) this is a detailed explanation of every data element in admission, discharge, and annual update records that are in the CalOMS system at DHCS. These explanations describe how each valid value will be coded for each question in the electronic record for an admission, discharge, or annual update. Field edits and errors are also described in this document.

***CalOMS Tx File Instructions (For Input Data)*** – this is a detailed explanation of the file format requirements for files submitted to the CalOMS Tx system at DHCS. These explanations include a description of the field layouts for each record type (admissions, discharges, annual updates, provider no activity, header, footer). Also included are descriptions of submission rules and errors.

***CalOMS Tx Data Quality Standards*** – this is a detailed description of data submission standards and measures for CalOMS Tx data. This document includes such standards as the allowed time for submitting data, error tolerances, and data quality and compliance reporting.

---

**CalOMS Tx Reports User Guide** – This document is a collection of sample reports that can be generated from the CalOMS Tx application. These reports are available to each county and direct contract provider.

The CalOMS Tx data collection system services plays a key role in California's Department of Health Care Services (DHCS) mission of reducing substance use disorders (SUD) problems in California. CalOMS Tx plays this role by providing outcomes measurement in support of treatment programs. Treatment data collection is required from all providers licensed for narcotic replacement therapy and all providers receiving DHCS funding for all clients receiving the following services:

NOTE: Data reporting is only possible when the county has a contract with the treatment provider

- ❖ Non-Residential / Outpatient
  - ✓ Treatment Recovery
    - Outpatient Drug Free
    - Outpatient (medication)
    - NTP Maintenance
  - ✓ Day care Intensive Outpatient Treatment (IOT)
  - ✓ Outpatient Detoxification
    - Outpatient Detoxification (non-medical)
    - Outpatient Detoxification (medical)
    - NTP Detoxification
  
- ❖ Residential / Inpatient
  - ✓ Detoxification (hospital)
  - ✓ Detoxification (non-hospital)
  - ✓ Residential (30 days or less)
  - ✓ Residential (31 days or more)

Any provider that receives any public funding for SUD treatment services and all Narcotic Treatment Program (NTP) providers must report CalOMS Tx data for all of their clients receiving treatment, whether those individual client services are funded by public funds or not.

Providers will collect client data at admission and at discharge or administrative discharge from the same treatment program. Data will also be collected annually as an annual update for clients in treatment for over twelve months.

The purpose of the Data Dictionary is to provide details on the specific CalOMS Tx data elements to be collected by the providers and counties and submitted to DHCS. This document contains the following sections:

- ❖ [Section 2 Data Organization](#) - identifies the Data Groups into which the Data Elements have been organized, the Data Description Format which is how each data element is described, the Alternative Values that are allowed for many of the data elements, and relevant SUD Treatment Data Sets.
- ❖ [Section 3 Data Element Details](#) - provides the details for each data element to be collected for CalOMS Tx and submitted to DHCS.
- ❖ [Section 4 List of County Codes](#) - provides the list of valid county codes that must be used for data elements that require California county codes.
- ❖ [Section 5 List of State Codes](#) - provides the list of valid state codes that must be used for data elements that require state codes.
- ❖ [Section 6 List of Error Codes and Messages](#) - provides a comprehensive list of error codes and messages for all data elements.
- ❖ [Section 7 List of Data Element Attributes and Valid Values](#) – provides a list of valid values and formats for all data elements in one table. Also provided is a mapping of valid alternative value codes (999XX codes) for each data element.
- ❖ [Section 8 List of Data Element Uses and Data Set Mapping](#) – provides a crosswalk of how each data field uses other data fields or is used by other data fields for data validation. This section also maps the data elements to the common data sets described in Section 2.5.

## 2. Data Organization

### 2.1 Data Groups

This document describes various data elements to be collected for CalOMS Tx. The individual elements are organized into Data Groups. A list of these groups and their description is included in Table 1 below. Each of these Data Groups is further divided into Data Elements and numbered sequentially (e.g. ADM-1). Section 3 provides details for the data elements that are collected and submitted to DHCS. How these data are aggregated into specific records is described in the File Instructions document.

It is important to note that some allowable values for some data elements vary with record type. See Section 8 for a crosswalk of these records and the File Instructions for further guidance on how to construct a valid record and allowable value set.

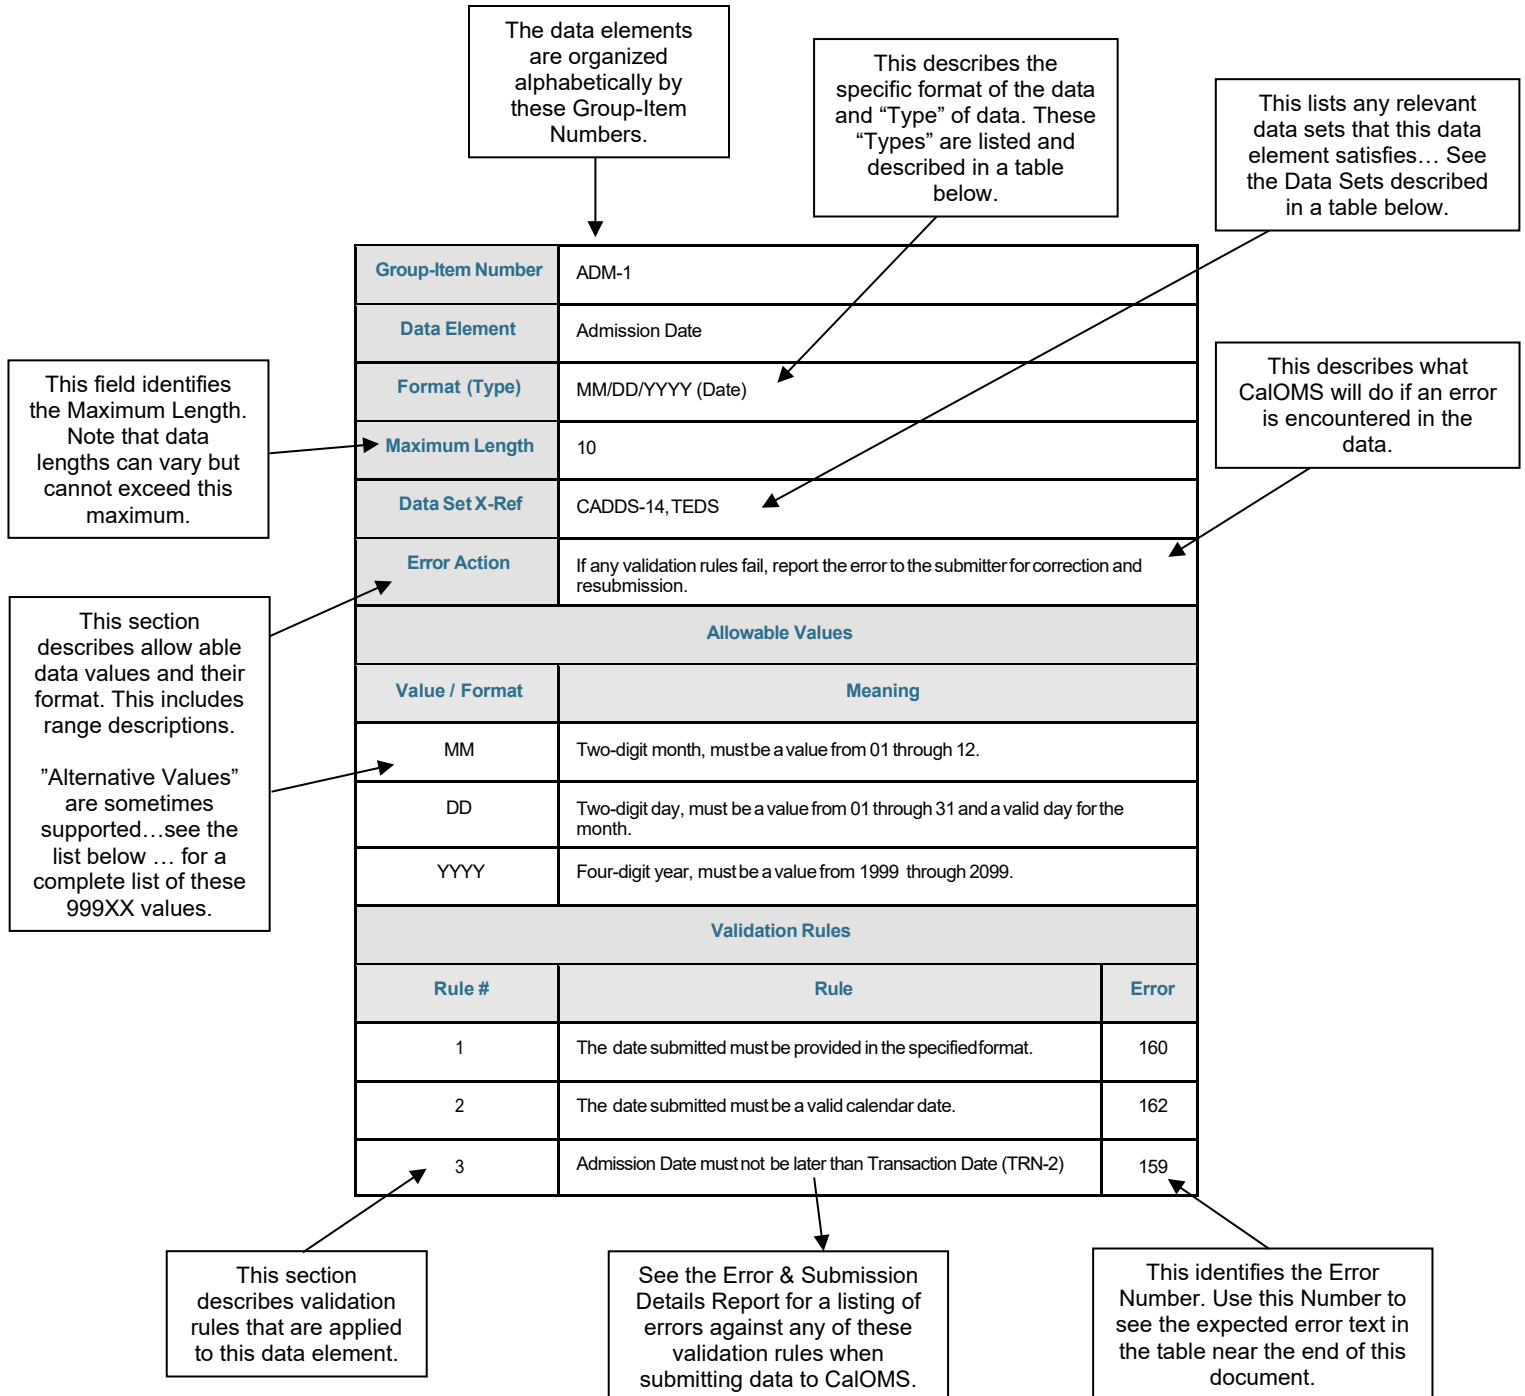

**Table 1–Data Item Groups**

Abbreviation	Group Description
ADM	Admission Data
ADU	Alcohol and Drug Use Data
AUP	Annual Update Data
CID	Client Identification and Demographic Data
DIS	Discharge Data
EMP	Employment Data
LEG	Legal Status / Criminal Justice Data
MED	Medical / Physical Health Data
MHD	Psychological/ Mental Health Data
SOC	Family / Social Data
SYS	System Required – Items that are needed to track file submissions.
TRN	Transaction Data

## 2.2 Data Description Format

The figure below provides an orientation to how Data Element information is presented in Section 3.

**Figure 1: The Detailed Data Item Information Format**

## 2.3 Alternative Values

There are various alternative values that are used for many of the data elements, these alternative values are provided in Table 2 below. These values are only allowed for specific fields and in specific circumstances. Please refer to the specific item details to determine where these values are acceptable.

Counties and Direct Contract Providers are required to use these alternative value codes in their data files submitted to DHCS.

***Table 2 – Alternative Values Used Throughout the Data Elements***

Value	Definition	Use
99900	Client declined to state	This value is used when the client has declined to state an answer for the question.
99901	Unknown or Not sure / Don't know	This value is used to indicate that the answer is unknown to the provider or to indicate that the client response is "Not sure or Don't know."
99902	None or not applicable	This value is used to indicate that the question is not applicable to the client or that the answer to the question is "none."
99903	Other	This value is used when the client's answer is not of the specific options provided.
99904	Client unable to answer	This value is reserved for developmentally disabled clients that are unable to answer the question and for clients undergoing detoxification services that have not stabilized.

## 2.4 Data Types

CalOMS Tx Data Elements are represented by different data types. These different data types are described in the table below.

**Table 3 – Data Types for CalOMS Tx Data Elements**

Type	Definition	Example
Numeric	Numeric characters only (0-9) or some restricted subset of these characters. (ASCII Decimal Values 48-57)	Provider ID ...NNNNNN (County Code + Facility ID), 0-999 and 99901, 99904 Report Month (SYS-3) ... YYYYMM
Alpha	Alphabetic characters only (a-z, A-Z) or some restricted subset of these characters. (ASCII Decimal Values 65-90 and 97-122)	Mother's FirstName System Record Indicator (SYS-1)
Alpha Numeric	String can be made up of one or more alpha numeric characters including a-z, A-Z, 0-9, all special characters (except pipe and sometimes tilde)**. However, valid values can be further restricted by the "Value / Format" information for that data element. (ASCII Decimal Values 32-126)	Example of unrestricted values: Form Serial Number (TRN-3)  Example of restricted values: Zip Code at Current Residence (CID-8)
Date	Numeric data that conforms to valid month, day, and year combinations and the specified date format.	MM/DD/YYYY
Date Time	Numeric data that conforms to valid date and time values in the specified date and time format.	MM/DD/YYYYHH:MI:SS

---

The pipe character (ASCII Decimal Value = 124) is used as a data delimiter/separator for all CalOMS Tx data fields and cannot be included as a valid data character in any field.

The tilde character (ASCII Decimal Value = 126) is used as data delimiter /separator for CID-18 (Disability) and CID-15 (Race) and cannot be included as a valid data character within those data elements.

CalOMS Tx converts all lowercase alpha characters to uppercase for the purposes of data matching for the following data elements:

- ❖ Birth First Name (CID-9)
- ❖ Birth Last Name (CID-10)
- ❖ Date of Birth (CID-4)
- ❖ Mother's First Name (CID-14)
- ❖ Place of Birth County (CID-11a)
- ❖ Place of Birth State (CID-11b)

These data elements are stored 'as-is' – the conversion to uppercase is only for purposes of matching records to identify unique clients.

---

## 2.5 Treatment Data Sets

The CalOMS Tx data set consists of five smaller sets of data elements:

**Unique Client Identifier (UCI):** The UCI is a set of 13 elements that collect personal information about the client. This information is critical as it enables us to track clients as they move through the system of care. This information will be used to identify the collection of treatment services an individual receives during a treatment episode.

**Treatment Episode Data Set (TEDS):** This is a set of federally required data elements that inform about each client's admission and discharge. Admission and discharge data on all clients served in California's publicly funded treatment programs must be reported via TEDS.

**California Alcohol and Drug Data Set (CADDSS):** This is the system DHCS built in 1991 to collect TEDS required data. The elements of the CADDSS data set include all the required TEDS elements, optional TEDS elements used for state reporting, and state-required data elements. The CADDSS/TEDS questions have been included in the CalOMS Tx data set to continue collecting required data and because CalOMS Tx will ultimately replace the CADDSS system.

**National Outcome Measures (NOM):** The NOM data set evolved from the Performance Partnership Grants (PPG), which was a set of data elements proposed by CSAT and designed to measure outcomes. The PPG data would have been reported by states annually in order to comply with the proposed federal funding allocation method that would have replaced the Substance Abuse Prevention and Treatment (SAPT) block grant. However, as the Center for Substance Abuse Treatment (CSAT) continued to work with states in developing the PPG, the proposed PPG evolved into the NOM.

The NOM includes outcome data elements that will be reported annually in the State's SAPT block grant application. These elements will enable measurement of change in a number of life areas including: alcohol/drug use, employment and education, criminal justice, family and living conditions, access/capacity, social connectedness, and retention/length of stay. Some of these life areas are still being defined by CSAT. Therefore, not all the proposed measures and life areas will be collected in CalOMS Tx Phase 1.

**Minimum Treatment Outcome Questions (MTOQ):** The MTOQ data set consists of 30 questions and was developed by DHCS in collaboration with the Treatment Sub Work Group of the Implementation Working Group (IWG). Like the NOM, this set of questions is designed to measure outcomes in a number of life areas. The MTOQ will enable measurement of change in seven life areas: alcohol use, drug use, employment, family/social, medical, legal, and psychological.

### 3. Data Element Details

### 3.12.3 (TRN-3) Form Serial Number

The form serial number for an admission record and its matching discharge or annual update record must match. This is a sequential number generated by the County's system or Direct Contract Provider's system. Form serial numbers assigned to admissions under CADDs must not be re-used for admissions under CalOMS Tx.

A County or Direct Contract Provider should begin the numbering for CalOMS Tx at a position that will guarantee that a duplicate with CADDs will not be used. Gaps in the numbering between CADDs and CalOMS Tx at the time of cutover to CalOMS Tx are acceptable.

All eight characters of the serial number must be used (i.e., blank or null characters in this field are not allowed). The leading alpha character can be assigned as the county or Direct Contract Provider chooses. The alpha characters are not intended to be assigned based on service modality provided.

The length of the form serial number has been expanded by one digit to allow for growth over time. This additional numeric digit must be a zero (0) until all counties have converted to CalOMS Tx operation and DHCS retires CADDs. DHCS will inform the counties when this leading numeric digit can be used.

As an example of the use of form serial number for CalOMS Tx, if the last form serial number assigned to a client admission in CADDs is D123456, the County or Direct Contract Provider may choose to use D0123457 as the first serial number assigned to a client admission in CalOMS Tx. Alternatively, a County or Direct Contract Provider may choose to start the numbering in CalOMS Tx at E0000001.

## 8.0 List of Data Element Uses and Data Set Mapping

The following table maps the use of data elements for validation by a given data element (“Uses These Elements”). The table also lists fields that use each data element for their validations (“Used By These Elements”). The table also lists standard data sets that each element is a component of (UCI, CADDs, TEDS, MTOQ, and NOMS) as presented in section 2.5.
