

Contingency Management (CM) is an incentive-based pilot program designed for Medi-Cal eligible clients with a moderate or severe stimulate use disorder (StimUD) diagnosis. The pilot consists of a structured 24-week outpatient CM program, followed by Recovery Services.

Client must be admitted to an outpatient program and offered outpatient services. As with CalOMS admissions, a beneficiary will be considered a readmission if they leave CM services for more than 30 days.

Client can only participate in one contingency management program at a time.

**Instructions**

*Client actively receiving SUD Treatment – follow instructions 1-2 for diagnosis and encounters.  
Client being admitted, follow normal admission process then instructions 1-2 below.*

**1. Diagnosis List –**

- Enter appropriate StimUD diagnosis (if the client does not already have one)
- Enter the two following diagnosis (later to be selected from the Diagnoses for this Service section of the encounter)
  - Z71.51 Drug abuse counseling and surveillance of drug abuser (use for negative urine test for stimulants)
  - R82.998 Other abnormal findings in urine (use for positive urine test for stimulants)
- **NOTE:** When entering the two diagnoses, **do not enter in secondary or tertiary fields**

| Client Diagnosis     |   |   |
|----------------------|---|---|
| Primary              | F15.23-Amphetamine or other stimulant withdrawal, With moderate or severe use disorder(DSM 5) |   |
| Secondary            | ✗   |   |
| Tertiary             | ✗   |   |
| Behavioral Diagnosis | Code  | Description   |
|                      | F15.23  | Amphetamine or other stimulant withdrawal, With moderate or severe use disorder |
|                      | Z71.51  | Drug abuse counseling and surveillance of drug abuser                           |
|                      | R82.998   | Other abnormal findings in urine  |
